

**AMENDMENTS TO CLAIMS**

The listing of claims below replaces all prior versions of claims in the application.

1-5. (Cancelled)

6. (Currently Amended): A wall mounting structure according to claim 3, A wall-  
mounting structure for supporting an object to be supported on the wall surface of a room,  
comprising:

a mounting plate to which an object to be supported is fixed;  
accommodating grooves extending in the moving direction of the object to be supported  
are formed in the wall surface, and

slide support members for movably supporting the mounting plate on the wall surface,  
wherein

the slide support members are buried in the accommodating grooves,  
each of the slide support members is composed of a track rail and moving blocks which  
can move along the track rail,  
the track rail of the slide support member has a substantially rectangular section and ball  
rolling surfaces formed on both side surfaces of the track rail, while each of the moving blocks is  
formed in a saddle shape with a guide groove being loosely mated with a part of the track rail  
and assembled with the track rail through a large number of balls,

~~characterized in that~~ the mounting plate is coupled to the track rails or the moving blocks of the slide support members by connecting arms; and  
a decorative curtain for covering the slide support members fixed in the accommodating groove is provided at the opening of the accommodating groove.

7. (Original): A wall-mounting structure according to claim 6, characterized in that slits are formed in the decorative curtain at predetermined intervals in the longitudinal direction of the accommodating groove.

8. (Original): A wall-mounting structure according to claim 6, characterized in that each of the connecting arms is provided with a collar bite preventing board between a contact portion with the decorative curtain thereof and a coupling portion with the slide support member thereof.

9-10. (Cancelled).
